- Integrated iPod control via r-Lead/rDock
- CR100 8 page backlit learning remote control
- 2nd Zone audio output with independent volume control
- Video setup "Wizard"
- Full IR and RS232 serial control

solo Movie 2.1

The Arcam Solo Music and Solo Movie systems have enthralled customers Worldwide. Their unique combination of stunning sound quality and ease of use presented with discrete but stylish design have redefined what is possible from an integrated system. Recognising that many music lovers desire home theatre functionality without the complexity of a surround speaker setup, Arcam present the Solo Movie 2.1, the perfect solution for music lovers who also seek a high performance movie experience.

Using a pure stereo approach the Solo Movie 2.1 delivers a fully evolving sound delivered by either a stereo pair of loudspeakers or smaller "satellite" speakers with a companion subwoofer. Remaining true to the original music, no artificial processing is employed thus eliminating the de-focused image and compromised dynamics typical of "pseudo surround" effects so often deployed in such systems. The Solo Movie 2.1 features powerful 50wpc audiophile grade power amplifiers. These deliver a performance that captures every nuance of the original recording with the ability to drive demanding full range speakers.

In common with the Solo Movie 5.1, the new 2.1 system delivers a set of features that is unmatched in its class. HDMI and component or SCART video switching ensures complete compatibility with High Definition television while the internal 720p/1080i video scaler ensures a stunning picture from its internal DVD player. When coupled with the rDock or rLead the integrated iPod interface offers complete integration and the best sound quality possible. The included learning remote control gives the user easy access to their favourite media, no matter how it is presented. A full suite of RS232, IR and trigger connections mean the Solo Movie 2.1 is ideal for many performance-orientated custom installations.
